

SPLITCH — Features Report v2

Updated edition of MORPH-Features-Report.pdf . Sections 1–8 carry over the original report (propose → debate → consensus → community-grounded enrichment). **Section 9 is new in v2:** 24 additional features (Among Us-style sabotage, interactive map systems, objectives, evidence systems, co-op, seeker economy, round structure), each hardened by an adversarial anti-exploit pass against the wager layer.

Scores = fun / streamability / retention / feasibility / exploit-resistance (out of 5 unless noted).

1 — The signature moves (our differentiators)

- The real data flips the whole thesis: the game doesn't have a novelty deficit, it has a **TABLE-STAKES deficit**. Meccha Chameleon sold ~10M copies at a flat \$5.99 with ZERO MTX and 89% positive — the loudest complaints are all plumbing, not missing mechanics. Front-load the plumbing.
- **Friend/party join is the single most-cited real pain** ('nearly impossible', 'spent more time joining than playing'). It is P0-existential. Nothing ships before this.
- **'Art defeated by tech':** lighting/reflections make hiders 'look nothing like the surroundings' and the eyedropper 'pulls a different shade than what's on screen.' Morph is NOT yet the dominant skill — the renderer is. Core-loop fairness must ship before any novelty stacks on top.
- **SILHOUETTE FOLD is the ONE v1 bet that survives scrutiny across all lenses** — the credible reason to leave a 10M-copy incumbent. Over-invest in it and make it lighting-robust. It is also the biggest solo-dev technical risk, so fund it by cutting roulette/traitor/emote-as-flagship.
- **TELL SKINS is the strongest economy idea and should govern the ENTIRE catalog:** every cosmetic must be provably non-P2W, auditable in a single streamer screenshot.
- **The \$MORPH coin is a solution to a demand nobody has proven.** UNVERIFIED appetite + 98.6% pump.fun rug rate + a documented crypto-averse clip audience = net liability at launch. Defer it; validate with honest USD cosmetics first.
- **NERVE ENGINE's 'stare = payout' is a bot-farmable faucet** (two accounts stare-farm in a private lobby) and inverts the core loop (rewards being spotted). Keep the tension, kill the payout — decouple money from gameplay signals forever.
- **The expanded post-round 'answer check' / results screen is beloved AND is the clip-factory GTM engine** — treat it as a flagship retention system, not UI polish.

2 — Flagship must-builds

- **Silhouette Fold (Shape Morph)** [5/5/5/2/4 · GAP] — Spend a limited charge to collapse your blob's SILHOUETTE into a nearby prop's outline, not just its texture — become the furniture.
 - Aim at a small/medium prop within 4m, hold 1.2s to fold: your outer mesh approximates that prop's outline and snaps texture to match. While folded you are near-undetectable but

movement-LOCKED, hold up to 20s, 2 charges/round (regen 1 per 3min, cap 2). Fold quality degrades with volume mismatch (a huge prop = loose fold, a tell). Fold snaps to a validated surface anchor BESIDE geometry (never inside — kills no-clip). Unfold takes 1s with an audible pop that auto-flags the highlight system. Morph stability (Heat Bloom) still drains while folded, forcing eventual unfold. Returns NO Pulse ping for a few seconds. The FUNCTIONAL ability is a free universal progression unlock; the shape LIBRARY (vase vs box vs gargoyle, identical hitboxes, context-gated) is the paid seasonal cosmetic layer.

- **Nerve Engine (Held Breath + Heat Bloom unified)** [5/5/5/3/4 · GAP] — A seeker's stare simultaneously ramps your score multiplier AND drains your morph stability — the stare that pays you is the stare that melts your disguise.
 - While a seeker's active moving cone holds a >75%-matched morphed hider: a private multiplier ramps $x1 \rightarrow x2 \rightarrow x3 \rightarrow x5$ at 3/6/10/15s AND morph stability drains at DOUBLE rate. Points bank per second; any movement >0.3-0.5m or texture change resets the multiplier to $x1$ (banked points are safe) and starts a 2s exhale. At low stability (~20%) a hider-only shimmer warning fires: hold and pray, or risk the 1.2s vulnerable re-lock. Multiplier freezes 4s of grace when the cone leaves. Rendered AS the nameplate turning into a rising NERVE bar with a heartbeat SFX; piped to spectator/stream overlay, never to the seeker. 'HELD/Stared Down' banner auto-clips. Anti-farm: seeker must be non-party + actively hunting, per-round Nerve cap, texture-match gate.
- **Whistle Roulette (choose your tell)** [5/5/4/4/4 · GAP] — The forced ~45s whistle becomes a bluff economy: emit True for a nerve bonus or Throw a decoy — but you can never go fully silent.
 - Holding still fills a Silence-credit meter that gates spends. 5s before each forced whistle a radial prompt offers: TRUE (emits from real position, +honest-nerve points scaled by nearest-seeker proximity) or THROW (decoy sound from an LOS-validated point up to 10-20m away, costs the full meter, traceable 3s wind-up hiss audible within 8m, ~2/round). MUTE is CUT — silent camping stays impossible; ignoring the prompt defaults to TRUE. Serial whistlers get pinned by a seeker audio-triangulation passive. Whistle SOUND and throw VFX are cosmetic SKUs — timing/volume fixed, never P2W. (See §6: *redesign to Seeker Escalation Clock for the RNG fairness complaint.*)
- **Pulse Ping (readable seeker scan)** [4/4/4/4/5 · GAP] — A telegraphed sonar pulse that flags morph MISMATCH — well-blended hidere are invisible to it and spam self-punishes.
 - 12m LOS-gated ring over ~1.5s with loud charge-up SFX + visible shockwave (hidere get ~1s to freeze/reblend). Hidere below ~70% texture-match get a 2s highlight; perfectly-blended and Folded hidere return nothing. Cooldown 45s; each empty pulse adds +15s (anti-spam). Freshly-splattered or mid-re-lock hidere ping BRIGHTER — hard-wiring the Fold/Pulse/Warning-Shot counterplay triangle. Never sees through walls.
- **The Mimic (Traitor Hider)** [5/5/4/3/3 · GAP] — One of the two hidere is secretly the Mimic, scored ONLY by causing their partner's tag.

- Spawn rate ~12-15% so paranoia is earned by rarity. The Mimic sees the partner's faint position pulse; wins only if the OTHER hider is tagged before the timer AND they survive. Sabotage reuses existing systems: the Whistle THROW aimed AT the ally, plus a gaze-bait beacon. HARD RULE: no measurable sabotage action = ZERO score (kills passive-troll value). Gated out of new-player and Prop Party queues. Resolved via the Confessional Vote. Earned reward: vaulted 'Two-Faced' split-texture skin. (See §6: *deprioritized to post-safety opt-in casual mode.*)
- **Scale Roulette (Official Size Modes)** [5/5/4/5/5 · GAP] — Rotating official player-size modes — Teeny 0.4x, Normal, Chonk 1.4x, GIGA 2.2x — each rebalancing the hide/seek loop.
 - Server-authoritative scale, per-scale scoring rebalance so no size is strictly best. 'Mixed Handicap' (hiders Teeny, seekers GIGA) is the flagship David-and-Goliath stream playlist. Ranked = Normal only. Win-rate-based auto-assignment CUT. (See §6: *quarantined to casual playlist post-anti-cheat.*)
- **Tell Skins / Cosmetic Tells (Stealth Rating spine)** [4/4/4/4/5 · GAP] — Every flashy cosmetic carries a published 'Stealth Rating' — the flashiest skins are HARDER to hide in, structurally preventing pay-to-hide.
 - Plain/earned skins ~100% fidelity; premium 'Molten' leaves a 1px heat-haze, 'Prism' refracts at grazing angles, 'Golden' chimes faintly on the whistle cycle. Spending money makes you EASIER to catch — the flex is winning DESPITE the tell. The rating feeds the Nerve Engine as an inverse-fidelity score multiplier (up to 3x). One number = pricing axis, anti-P2W guarantee, score multiplier. VETO: no cosmetic may reduce splatter-tell duration or any timing/detection stat.
- **Reveal Emotes (Peekaboo economy)** [4/5/4/4/5 · GAP] — Cosmetic emotes that only play when you CHOOSE to break cover — the taunt IS the reveal, the clip is the product.
 - One-tap: camouflage drops in a stylized flourish (Sticker-Peel, Melt-and-Reform, Confetti-Burst), 2s animation + sting, re-morph. Zero mechanical advantage; 1-per-life cap. Signature tiers CANNOT be bought — only earned. Auto-composites into the Freeze-Frame trophy card. (See §6: *deprioritized to low-cost flavor; clip value rolls into the Clip Card.*)
- **Freeze-Frame Photobomb (Trophy Card)** [4/5/4/4/5 · GAP] — Every tag snaps a shareable trophy card compositing both players' cosmetics — losers become content.
 - ~1.5s cinematic freeze orbits seeker + caught hider; one-click-shareable card (map, score, names). Hiders equip a photo-only Reveal-Morph (rubber duck, screaming banana); seekers equip a Signature Tag pose. Rarity watermark advertises cosmetics on every shared card. Also the fast Mimic reveal ('MIMIC CONFIRMED'). Curated catalog only — brand-safe.
- **First Blob (Onboarding + Practice Range)** [3/2/5/5/5] — A 90-second zero-reading guided first match vs friendly bots, then a free starter cosmetic.
 - Auto-route new accounts to a solo map with 3 dumb seeker bots and diegetic prompts (walk → SCAN → MORPH → LOCK POSE → earn gaze points). Grants the non-tradeable 'Rookie

Ripple' texture and unlocks matchmaking. Permanent Practice Range with bots + paint/scale sandbox.

- **Rotating Safe Zone** [4/3/4/5/5] — A telegraphed 12m no-scoring/no-tagging sphere shifts every 3 minutes — the anti-camp anchor and rhythmic heartbeat of the map.
- **Pressure System (Tell Debt + Redline Zones + Purge Ring)** [4/4/4/3/4 · GAP] — Three-layer anti-camp: personal silhouette-leak, cell sealing, and a high-value flush event.
 - (1) TELL DEBT: staying within a 2m radius ~90s ghosts your true silhouette through the morph (5→30% opacity), visible only in a seeker's cone; moving to a new grid cell drains it + 4s clean-morph grace. (2) REDLINE ZONES: 40s+ cumulative dwell cells seal (block morph-LOCK, not passage) after a 10s warning; reopen in 60s. (3) PURGE RING: every 3min a 10m ring spawns on the hottest cell — survive 12s inside under genuine gaze for 3x points, else nameplate force-flickers. Banned/telegraph-locked in ranked.
- **Shape-of-the-Season Silhouette Library** [4/5/4/3/4 · GAP] — Themed body-SHAPE cosmetics (mushroom, crate, gargoyle) as mint-limited vaulted seasonal sets hanging off the FREE Fold ability. Context-gated (a traffic cone only helps near real cones), identical hitboxes, never P2W.

3 — Full idea catalog by category

Tiers: T1 must-build · T2 strong · T3 experimental · GAP = fills a gap the original lacks.

A — Challenges & Milestones

- **Morph Mastery Trees** [T2 · 3/3/5/4/4 · GAP] — Parallel Hider and Seeker challenge trees (daily/weekly/seasonal) gated on the deep systems ('survive 3 Folds without a tag', 'win a Pulse-read chase') so progression teaches mechanics. Dual tracks fix the hider/seeker engagement asymmetry. Morph Points soft currency; \$MORPH can skip a tier — convenience only, never power.

B — Cosmetics · Skins · Emotes

- **Tell Skins / Cosmetic Tells** [T1] — see §2.
- **Reveal Emotes** [T1] — see §2.
- **Freeze-Frame Photobomb** [T1] — see §2.
- **Shape-of-the-Season Silhouette Library** [T1] — see §2.
- **Memory Materials & Palette Vault** [T2 · 3/3/4/4/4] — Save/load morph presets (top community request; slots beyond the first few cost \$MORPH) + permanently unlock rare surface materials by surviving rounds morphed onto them — a travel diary of clutch wins. Ultra-rares on limited event maps, mint-limited and tradeable. Never power. Anti-bot: survival must include earned gaze/seeker-proximity.
- **Copycat Emote Duels** [T3 · 3/4/3/5/4] — Safe-zone social toy: mirrored emotes, conga lines. VETO ENFORCED: currency payout CUT (trivially bottable). Pure expression, zero reward.

C — Sabotage & Social-Deduction

- **The Mimic** [T1] — see §2 (and §6 deprioritization).
- **Confessional Vote (Post-Round Reveal Card)** [T2 · 4/4/4/4/4 · GAP] — A FAST post-round accusation card (25s meeting phase was vetoed as pacing-poison): anonymized evidence feed (whistle-throw logs, beacon flashes, flare locations) → vote who the traitor was. Correct majority splits a Detective bonus; a surviving traitor earns a Getaway bonus; correctly voting 'nobody' rewards skeptics. Never kicks real players. Prime viewer-participation real estate.
- **The Mole (bribed seeker, hardened)** [T3 · 4/4/3/3/3 · GAP] — One seeker is secretly bribed but scores ONLY on measurable subtle-sabotage with a hard per-round cap; a mid-round Interrogate vote can slash their reward in real time. Matchmaking flags repeat Mole-favored-survivor pairs. EXPERIMENTAL: guarded/limited-playlist first.
- **Splatter Frame Job (Mimic-lobby only)** [T3 · 3/4/3/4/3 · GAP] — Deliberately eat a splatter, relocate, leave a teammate glowing. Glow scales with the victim's camo quality (framer sacrifices their own cover), 1s wet-paint cue on the framer, 'wipe' cleans it, capped once per event. Confessional Vote provides accountability.
- **Alliance Pact (Shared Fate) — Mimic-gated** [T3 · 3/4/2/3/2 · GAP] — Trust pact a Mimic can propose purely as bait, then defect while the partner is under gaze. Visible temptation meter for spectators. NOT available outside Mimic lobbies (removes the premade collusion floor).

D — Dynamic Map / Round Events

- **Rotating Safe Zone** [T1] — see §2.
- **Pressure System** [T1] — see §2.
- **Rift Modifier Wheel** [T2 · 4/4/5/4/4 · GAP] — Every 3 minutes a public HUD wheel locks a mutator: Low Gravity, Mirror Morph, Silent Round, Double Gaze, Speed Seekers. Server-rolled + public = no info asymmetry. The SEASONAL delivery vehicle (new themed mutators each season). Harshest mutators disabled in ranked.
- **Wet Paint Sweep / Paint Tide** [T2 · 4/4/4/3/4] — A telegraphed paint tide sweeps ~1/4 of the map every ~90s, re-tinting surfaces ~25s AND force-recoloring hidens caught in it. Sprint INTO the tide to get color-matched a split-second before a seeker rounds the corner; seekers learn to walk behind the tide where fresh mismatches glow. ~6s wet-match window; server-randomized color.
- **Last Light (End-Game Chaos Phase)** [T2 · 4/5/4/4/5] — At T-45s the safe zone collapses to a contested 2m sphere worth a huge bonus, survivors emit a rising pulse glow, seekers gain +30% speed, and a paint front sweeps to color-break memorized spots. One guaranteed climactic finish per round. Glow is forced/equal; 'Clutch' progression for surviving it.

E — Scoring Innovations

- **Nerve Engine** [T1] — see §2 (and §6: payout CUT, tension kept).
- **Nameplate Bounty (go loud)** [T2 · 4/4/3/4/4 · GAP] — Toggling your nameplate ON doubles your Nerve ceiling and posts a +750 seeker bounty on your head; visible within 20m. Lazy color choice flares the plate brighter. 10s toggle lockout. Anti-collusion: capped bounty payouts per pair, genuine-LOS tag required.

- **Distress Morph (Dead Man's Tell)** [T2 · 4/4/4/5/5 · GAP] — On tag, the eliminated hider flashes a distress texture + audio pulse (~4s) audible to living hidere, leaving a 20s paint-stain 'grave'. Survivors get reposition info; a 'Sole Survivor' bonus rewards outlasting a partner's flare by 20s. A Mimic can die deliberately to plant a funneling flare (feeds the Confessional Vote). One flare per genuine tag.
- **Bounty Hider + Chat's Bounty (position-safe)** [T2 · 4/5/3/3/3 · GAP] — Mid-round one hider is marked for triple points (server-rolled, or chat-voted with streamer integration). VETO: no through-wall marker — seekers get only a vague directional shimmer refreshed ~20s, and only AFTER an honest first sighting. Anti-repeat selection. 'Most Wanted' prestige line.
- **Gaze Bank / Nerve Currency** [T2 · 3/4/4/4/4] — Nerve points convert to a non-purchasable soft currency that ONLY buys cosmetics. Multiplied by Stealth-Rating inverse fidelity (flashy = up to 3x) — the bravest play requires the hardest-to-hide cosmetics. Anti-farm: non-party actively hunting seeker, per-round cap, >75% match required.
- **Warmth Meter (proximity close-call)** [T3 · 4/4/3/3/2 · GAP] — Private meter fills while a seeker searches near you without finding you; at 100, if they leave empty-handed, cash a 'Close Call' bonus + 2s adrenaline dash. Ships ONLY with Held-Breath-grade anti-farm guards (non-party seeker, genuine LOS, per-round caps, no fill while parked) or not at all.

F — Modes

- **Scale Roulette** [T1] — see §2 (and §6 quarantine).
- **First Blob** [T1] — see §2.
- **Prop Party (Chaos Casual Mode)** [T2 · 4/4/4/4/4 · GAP] — Prop-dense 6-hider/4-seeker party playlist where repeated textures mean sloppy newbie morphs still blend. 5-min rounds, whistles every ~25s, a silly modifier every round. No ranking. The Mimic and harsh systems gated OUT. Hosts the Costume Contest runway.
- **Mirror Morph (mutator, standalone-worthy)** [T2 · 4/4/3/4/4] — Your morph auto-copies the last surface you touched — movement paints you. Rewards clever routing, punishes careless contact. The Rift Wheel's marquee entry and a natural onboarding 'wow'.

G — Social · Streamer · Viewer

- **Costume Contest Intermission** [T2 · 4/4/3/4/4 · GAP] — 20-second pre-round runway; lobby (or Twitch chat via keyword) votes a winner for a small Morph Points tip; winner spotlighted on the next loading screen. Can't self-vote; cosmetic moderation before display.
- **Whistle Skins (audio-swap only)** [T2 · 3/4/3/5/5] — Kazoo, opera, air-horn, streamer voice packs; timing/volume fixed. VETO ENFORCED: the 'Silence Auction' viewer mute/amplify lever is CUT (pay-to-win-by-proxy + grieving vector).

H — Progression & Meta

- **Season of Surfaces (8-week themed seasons)** [T2 · 3/3/5/4/5 · GAP] — Re-themed map palette (reuses geometry: Jungle, Neon City, Stone Ruins) + ONE always-on modifier that shifts the meta + soft-reset rank (Bronze→Morph Master). The container for all cosmetic sinks. Vaulted seasonal items = FOMO without loot-box randomness.

- **Prestige Ledger** [T2 · 3/3/4/4/5] — ALL scattered earned auras (Mutator Medals, Purge Survivor, Sole Survivor, etc.) consolidate into ONE mint-limited, unbuyable prestige collection — the anti-P2W status ladder. Soft-resets each season.

I — Hider / Seeker Abilities

- **Silhouette Fold** [T1] — see §2.
- **Whistle Roulette** [T1] — see §2 (and §6 redesign).
- **Pulse Ping** [T1] — see §2.
- **Marked / Splatter Chain (collateral only)** [T2 · 4/4/3/4/4] — Any shot splatters paint ~8m; caught hidere get a glowing wet stain (~6s) they must scrub off. 'Clutch reblend' within 2s clears it for a bonus. AMMO ECONOMY governs spray-spam: misses burn extra ammo, honest splatters refund partial. Teammate smear-framing CUT outside Mimic lobbies.
- **Warning Shot Economy** [T2 · 4/4/3/4/4 · GAP] — Half-ammo non-lethal shot (~5m): real hidere micro-flinch (0.3s wobble) unless they spend a 'steel nerve' hold (+unflinching points); decoys, Folded silhouettes, and true props do NOT flinch. Zero-flinch shots refund partial ammo — correct probes are neutral, wrong ones costly.
- **Decoy Shed (bait gadget)** [T2 · 4/5/3/4/4 · GAP] — 1 charge/round: drop a frozen morph-clone of your current pose/texture (non-solid, 25s, whistles on its own timer). Pops into splatter if shot, wasting seeker ammo (+baited points, CAPPED per round vs colluding feeders). Tells: decoys never breathe/micro-idle and ping faintly under Pulse. A wasted LAST shot triggers a GOTCHA trophy card.
- **Second-Chance Ghost / Do-Over Dome (casual-only)** [T3 · 3/3/4/3/3] — Tagged hidere become non-scoring ghosts who can reach a telegraphed Do-Over Dome for ONE respawn as an un-morphed blob at an exposed edge. Casual/party queues ONLY; ghost 'Boo' fake-whistle CUT.

4 — Community-grounded additions (from real player sentiment)

Scores /10.

- **Lighting-Aware Fold** [T1-must-build · 9/8/9/4/8] — On fold, the morphed mesh samples the mimicked prop's light probes / reflection profile (specular, albedo, AO) server-deterministically. Directly answers the #1 verbatim complaint ('reflect light for some odd reason').
- **Disguise Read Meter (pre-commit)** [T1-must-build · 8/6/9/7/7] — Private 0-100% camo score from color-match, silhouette-edge break, and lighting exposure; updates live; never shown to seekers. Turns 'the lighting betrayed me' into learnable information.
- **Server-Authoritative LOS Streaming ('Fog of Data')** [T1-must-build · 6/5/9/3/10] — A hider only exists in a seeker's payload once server-confirmed in LOS+range — devtools/ESP have nothing to read. On a Three.js stack the only real defense is not sending the data.
- **Answer-Check Replay + One-Tap Clip Card** [T1-must-build · 8/10/8/6/8] — Auto-generated 6-10s watermarked vertical highlight (best morph or funniest bust) at round end; one tap to TikTok/Shorts. Every player becomes a distribution node.
- **Rematch-With-Party button** [T1-must-build · 7/6/10/8/9] — One tap keeps the whole party together in the next lobby. Party friction is the #1 churn driver.

- **Skill-Gated Morph Lock (anti auto-paint)** [T2 · 7/5/7/6/9] — Surface-matching resolves server-side over a short focus window; inhuman timing flagged. Kills eyedropper bots.
- **Seeker 'Second Look' read tool** [T2 · 8/7/7/7/8] — Cooldown-gated close-inspect: correct hider read = catch + small bonus; wrong accusation = cooldown penalty.
- **Seeker Escalation Clock** [T2 · 7/7/8/7/8] — Telegraphed rising pressure (scan radius/frequency and last-hider heat increase as the timer drains; hard end-of-round reveal). Replaces forced-random whistle RNG.
- **Deaf-Safe Visual Whistle** [T2 · 6/6/7/7/8] — Every involuntary tell also emits a server-driven screen-edge ripple/caption/haptic. Serves deaf/HoH + muted-tab players AND removes a spoofable client audio cue.
- **Tell Legend on death** [T2 · 8/7/8/7/8] — Results screen replays the EXACT tell that got you found. Death becomes learnable, not mysterious.
- **Camo Preset Loadouts** [T2 · 7/5/8/8/9] — Save/name/share/hot-swap texture+silhouette combos; a few slots free, more for flat USD. The cleanest non-P2W first purchase.
- **Radically Honest Shop** [T2 · 5/6/7/8/9] — USD prices, 100% guaranteed (no gacha), spend counter, optional limit, refund window. Auditable by a skeptical streamer in one screenshot.
- **Daily/Weekly Contract system + Featured Modifier rotation** [T2 · 7/6/9/8/7] — Rotating morph challenges + weekly rule twists. Cheapest anti-repetitiveness lever for a solo dev.
- **Earned Battle-Pass + Ranked ladder** [T2 · 7/6/9/5/8] — Free + premium seasonal track; MMR ranked queue with seasonal soft-reset. Cosmetics earned via mastery of the core loop.
- **Spectate-to-Clip / Ghost Director** [T2 · 7/8/8/6/8] — Eliminated players spectate live, ping clip timestamps, export. Dead-time becomes highlight crowdsourcing.
- **Bot-backfill for thin lobbies** [T2 · 6/5/8/6/7] — Capped morph bots below a player threshold, replaced by humans on join. An empty lobby is instant churn.
- **Stream-Snipe Honeytrap + Streamer Mode** [T2 · 8/9/6/6/7] — Masked join code/seat, entry delay, plus a planted decoy morph that makes snipers commit to the wrong prop — the threat becomes a clip.
- **Collusion Dampener** [T3 · 4/4/6/6/9] — Per-lobby reward ceiling + repeat-pairing detection; matches suspicious pairs apart. The guardrail if any earn faucet survives.
- **Community Palette / Silhouette Packs (creator rev-share)** [T3 · 6/6/7/4/6] — Curated UGC packs at honest USD prices, creators paid in USDC/SOL. The economy as artist support, not speculation.
- **Lobby Best-Disguise viewer vote** [T3 · 7/8/6/7/7] — 10-second post-round poll for the funniest hide; winner gets an earned (never bought) badge; clip flagged for the highlight reel.

5 — What real players validated vs contradicted

- **SILHOUETTE FOLD — VALIDATED:** unanimous; the ONE justified differentiator. Gated on lighting fairness and no-clip honesty.
- **TELL SKINS — VALIDATED:** the strongest anti-P2W idea; should govern the entire catalog.
- **ROTATING SAFE ZONE + PRESSURE SYSTEM — VALIDATED:** anti-camp is table-stakes pacing.

- **PULSE PING — VALIDATED (conditional)**: only if server-authoritative; a client-trusted ping is itself the wallhack.
- **Post-round REVEAL / answer check — VALIDATED**: 'the fastest feedback loop in the game.' Elevate to flagship retention + clip factory.
- **NERVE ENGINE — CONTRADICTED as specified**: tension half validated, payout half is a bot-farmable faucet. Keep the pressure, kill the money.
- **THE MIMIC — CONTRADICTED**: no demand evidence; griefing/collusion surface. Post-safety opt-in casual mode at most.
- **WHISTLE ROULETTE — CONTRADICTED**: death-causing RNG compounds the fairness grievance and is audio-gated. Redesign as Seeker Escalation Clock + Visual Whistle.
- **SCALE ROULETTE — NEUTRAL**: real viral surface but fragments matchmaking and amplifies hitbox exploits; casual/rotating playlist only.
- **REVEAL EMOTES — NEUTRAL**: beloved flavor, orthogonal to the core pain; fold clip value into the Clip Card.
- **\$MORPH coin — CONTRADICTED**: zero verified demand; the reference game proved the loop sells with NO economy.

6 — Cut / redesigned (don't build these as-is)

- **\$MORPH coin as a launch pillar — CUT from v1**. Reversible experiment only, post-PMF.
- **NERVE ENGINE payout — CUT the economic coupling**. Money and gameplay signals must never touch.
- **THE MIMIC — DEPRIORITIZE** to post-safety opt-in casual mode.
- **WHISTLE ROULETTE — REDESIGN** into the telegraphed Seeker Escalation Clock + Visual Whistle.
- **SCALE ROULETTE — DEPRIORITIZE** to casual playlist post-anti-cheat; never ranked, never marquee.
- **REVEAL EMOTES as a headline system — DEPRIORITIZE** to low-cost flavor.
- **'Deep sink-anchored cosmetics economy' as a flagship — DEPRIORITIZE**. Retention comes from map/rules cadence + progression, not sinks.
- **Fixed single 9-min round shape — DEPRIORITIZE**. Split casual (long/chaotic) vs ranked (tight).

7 — Must-fix table-stakes (before novelty matters)

- **[P0-existential] Frictionless friend/party join** — one-click invite URL/short code, join-in-progress, party persistence across rounds, reconnect-after-drop, browser-native no-download/no-wallet gate.
- **[P0-existential] Server-authoritative visibility + anti-cheat** — 'fog of data' LOS streaming, server-validated collision/movement/speed (no-clip), auto-paint timing detection, honeypot props for ESP.
- **[P0-existential] Lighting/reflection fairness pass** — deterministic hider-fair shading + client preview of how the disguise reads under current lighting.

- **[P0-existential] Moderation + child-safety layer** — report/mute/block/vote-kick, chat filter, voice off by default, no open DMs to minors, AFK auto-remove, lightweight ban pipeline.
- **[P1-critical] Paint/morph tool QoL** — accurate eyedropper, averaging sample, hex/RGB input, HSV sliders, palettes, fill bucket, undo/redo (tool-level), snap-to-prop, pre-round practice.
- **[P1-critical] Seeker-side balance kit + anti-stall + seeker progression** — Pulse Ping, escalation heat, last-hider pity heat, hard round-end reveal, seeker XP, telemetry balancing.
- **[P1-critical] Accessibility suite** — colorblind palettes + safe outlines, visual/haptic equivalents for every audio tell, full remap, one-hand/controller, reduced motion.
- **[P1-critical] Expanded answer-check results screen + clip export** — per-hider reveal, gaze heatmap, disguise-quality score, tell replay, MVP/best-hide/funniest-fail, rematch button, one-tap vertical clip export.
- **[P2-important] Reliable netcode + thin-lobby matchmaking** — sub-150ms WS sync, mid-round backfill/bot-fill, region matching, host-migration, lobby-timeout recovery.
- **[P2-important] Onboarding** — 60-second first round, practice sandbox, casual/ranked split with basic MMR.

8 — Build order

1. **PHASE 0 — EXISTENTIAL FLOOR:** friend/party join + invite links + rematch-with-party; fog of data + no-clip/anti-cheat + skill-gated morph lock; lighting/reflection fairness; moderation + child-safety. Nothing else matters if these are broken.
 2. **PHASE 1 — CORE-LOOP INTEGRITY + THE ONE FLAGSHIP:** Lighting-Aware Silhouette Fold (over-invested), Disguise Read Meter, paint QoL + Camo Presets, expanded answer-check + Tell Legend + one-tap Clip Card.
 3. **PHASE 1 (parallel) — SEEKER FAIRNESS + ACCESS:** Pulse Ping + Escalation Clock + Second Look + seeker progression; Safe Zone/Pressure; accessibility suite; netcode + bot-backfill; casual/ranked split + onboarding.
 4. **PHASE 2 — RETENTION SCAFFOLD:** Battle-Pass + Ranked, Contracts + Featured Modifiers, Spectate-to-Clip, Streamer Mode + Honeypot, map/UGC pipeline.
 5. **PHASE 3 — HONEST MONETIZATION TEST:** Radically Honest USD Shop (convenience + TELL-penalized cosmetics), Community Palette Packs with creator rev-share.
 6. **PHASE 4 — REVERSIBLE EXPERIMENTS** (post-PMF, ring-fenced, kill-switched): coin as cosmetics-only sink guarded by the Collusion Dampener; Mimic and Scale Roulette as opt-in casual modes; viewer Best-Disguise vote.
 7. **SEQUENCING RULE:** table-stakes RETAIN, novelty DIFFERENTIATES. Every decision judged against: *'can two 11-year-old friends get into one lobby, understand it in a minute, feel safe, play fair, and want a rematch?'*
-

9 — NEW IN v2: Sabotage, Map Systems & Objectives (24 features)

Generated by the same propose → debate → harden method: a social-deduction lens (Among Us / Project Winter DNA), a systems/level-design lens, and an adversarial anti-exploit pass. Every feature was red-teamed against the wager invariant:

THE POT INVARIANT: no mechanic may move stake from player A to player B outside standard win/loss resolution. All bonuses pay from the rake-funded side-pool, capped at that match's rake. Litmus test: *"Can two accounts in a private lobby end a match with more combined SOL than they entered with, or can one player reduce a non-consenting teammate's win probability?"* If either is yes, it does not ship in staked lobbies.

v2 signature moves

- **Touch-Up Orders is the keystone** — the Among Us task loop translated into paint: camo dries, forcing perfect hidere to move. Kills statue-camping, gives seekers a learnable rhythm, gives bluffers something to fake, and doubles as the anti-stall backbone protecting the wager clock.
- **Drip Ducts + Fresh Coat Drips + Dust Ledger + Topple Trail form an EVIDENCE GRAMMAR** — seeking becomes CSI (read drips, prints, disturbed props) instead of walk-and-stare. Evidence is symmetric and fake-able, keeping it a mind game, not an auto-win.
- **Poltergeist Protocol is the retention lever** — dead players become an unreliable-evidence faction instead of an alt-tab, and retroactively balance every evidence system by injecting doubt.
- **Sabotage is dosed, not default** — three tiers (always-on structure / rolled spice / opt-in mayhem); most rounds a suspicion is WRONG, which is what keeps suspicion fun.
- **The red-team killed the pretty ideas that touch the pot** — Sheriff's Brush, pot-slice Errands, staked Landlord, no-consent Fire Drill. The wager layer stays sacred.

9A — Sabotage verbs (map-level, Among Us DNA)

- **Blackout Coat** [5/5/4/4/4] — Any hider can pull the fuse box: 25s blackout (seekers drop to a flashlight cone), but every hider's whistle interval is HALVED for 90s and the puller whistles first and loudest.
 - *How:* One fuse box per match, visible on load-in, one trigger per match, server-enforced. Disabled in the first 90s and **final 90s (red-team guard: kills the clock-kill stall)** and in the Safe Zone room. Gated out of newbie queues. Selfish-vs-team: a personal escape window billed to everyone's noise budget.
 - *The clip:* lights slam off, six whistles chirp double-time in the dark, and the flashlight sweeps past a wall that just blinked.

- **Wet Seal** [4/4/4/5/4] — Spray a paint membrane over a doorway; seekers must scrub 3s to pass, hiders slip through (leaving a smear tell).
 - *How:* 2 charges drawn from the SAME pigment pool as camouflage (sealing = uglier camo). **Red-team guards: per-hider active-seal cap + per-doorway re-seal cooldown** — no chain-sealing a wing to run the timer. Can't seal Safe Zone entrances; active seals show on Gallery Cams (sealing a room advertises it). Server validates placement.
 - *The clip:* seeker scrubs frantically through the membrane while the hider walks out the back.
- **Static Bloom** [4/4/4/5/5] — Pop a pigment cloud that makes Pulse Ping return false positives on furniture for 20s.
 - *How:* One per hider; the shimmer is visible (a noticing seeker knows a resource was spent nearby = bluff object). Using it advances your whistle timer 25%. **Red-team guard: shared team cooldown — blooms never stack/chain**, so permanent ping-blindness stalls are impossible.
 - *The clip:* Pulse Ping lights up four "hiders" and every single one is a lamp.
- **Drip Ducts** [5/5/5/3/4] — The vent: paint-drainage pipes between rooms — but you drip.
 - *How:* 3-4 duct pairs per map, 2s squeeze animation, 45s per-player cooldown, soft gurgle audible in both rooms. Each use leaves a directional drying drip trail at BOTH mouths (~30s). Entering with a seeker in line-of-sight auto-fails (no untaggable escapes); server-resolved. Nerve keeps charging inside — not a stress-free waiting room.
 - *The clip:* seeker kneels at a dripping pipe mouth, looks up at the camera, and sprints.
- **Fire Drill** [5/5/4/4/3 · REDESIGNED] — The emergency meeting: one alarm pull freezes seekers 5s — then reveals the PULLER plus any hiders who OPT IN to the mass-whistle.
 - *How:* The original all-hiders forced whistle was a no-consent team-stake nuke (one colluder burns the whole team). Redesign: pulling freezes seekers and opens a 3s prompt; each hider chooses to join the group whistle (joiners earn a Nerve bonus; the puller always whistles, loudest). Disabled first 90s / last 60s; puller identity printed on the answer-check screen. Opt-in mayhem tier only.
 - *The clip:* five of seven hiders volunteer, the room detonates in whistles, and the seekers split like a SWAT breach.

9B — Social deduction & roles

- **Phantom Strokes** [4/4/4/5/4] — Fake-task bluffing: mime a Touch-Up with zero effect.
 - *How:* Hold at any station for the full animation — indistinguishable at range; within 3m a seeker sees no paint mist. Cover for traitor roles, bait for honest hiders. No side-pool credit for faking (trolls gain nothing). **Guard: the fake animation is server-broadcast identically to the real one** so memory-scrapers can't distinguish. The lie detonates on the answer-check screen.
 - *The clip:* results reveal the "hardest-working hider" faked all five touch-ups.

- **The Peacock** [5/5/3/4/3 · CASUAL-ONLY] — Jester: wins a side-pool bonus if FIRST tagged while camo integrity is above 70%.
 - *How:* Server-scored camo quality is the anti-troll gate (a naked blob in a doorway pays zero). Their stake still resolves as a loss; payout is rake-funded. **Red-team: a top wager threat — 2-account farmable (alt seeker insta-tags alt Peacock). OFF in staked lobbies, disabled in private/small lobbies, side-pool capped at the match's rake.** Never rolled twice in a row for the same player.
 - *The clip:* answer-check flips to "THE PEACOCK — tagged 0:47, camo 91%" over a smug trophy card.
- **Pigment Tether** [4/3/5/4/4] — Shared-fate trust item: merge paint pools (+40% budget), inherit each other's doom.
 - *How:* Two hidere bump avatars in the first 30s and BOTH CONFIRM via a plain-language "you die together" prompt (**red-team guard: explicit two-party consent + a sever option on cooldown**). If either is tagged, the survivor shimmers 12s and their whistle timer resets to imminent. Tether pairs print on the answer-check screen — betrayal is reputation-priced. No tethering within a premade above a 2-stack.
 - *The clip:* one blob gets tagged and across the map its hyperventilating partner gives away the whole bookshelf.
- **Splat Report** [4/4/5/4/4] — Body report: touch a dead teammate's splat to see the killer's route.
 - *How:* Tagged hidere burst into a persistent floor splat. The first LIVING hider to touch it gets a 6s ghost-trail of the tagging seeker's route; all seekers eat 8s of vision desaturation ("mourning fog"). One report per splat, rate-limited. Reporting a splat you caused yields nothing and silently raises your collusion score. Bonus rake-funded.
 - *The clip:* a hider tiptoes to their friend's wet splat, taps it, and the ghost trail leads to the closet beside them.
- **Sheriff's Brush — CUT (red-team).** One hider gets a 1-use splat against a suspected traitor. Intra-team elimination is a direct pot-invariant violation: player A deletes player B outside win/loss; two colluders splat the pot favorite with a throwaway account, and the "refund" creates mid-match stake mutation. Nobody stakes SOL where a teammate has a delete button. The Confessional Vote already provides the accusation beat safely.

9C — Objectives & tasks (reasons to move)

- **Touch-Up Orders** [4/3/5/4/4 · KEYSTONE] — Camo slowly dries chalky (~2min); rotating Touch-Up Stations restore it via a 4s exposed animation.
 - *How:* Three stations, server-random rotation, never inside the Safe Zone. Hidere are periodically FORCED off their perfect spot; seekers learn station timing. The Among Us task loop as paint, the structural anti-camp, and the anti-stall backbone the wager clock needs. Onboard it hard — a newbie-comprehension risk, not an exploit risk.

- *The clip*: one chalky shoulder is the only wrong pixel in the room, and the seeker sees it two seconds before the hider breaks for the station.
- **Errand Board** [5/5/5/4/4 · REDESIGNED] — Among Us-style chores (wind the clock, water the fern, post a letter) that pay — from the SIDE-POOL, never the pot.
 - *How*: Original "bank locked 5% pot slices" violated the invariant (pot money for non-win events; risk-free alt-lobby extraction). Redesign: each completed errand pays a rake-funded side-pool bonus AND grants in-match utility (a paint refill or cooldown refresh). 3 errands per hider, 3-5s exposed animations at fixed stations; completed stations visibly change state (clock hands move, letter flag up) so seekers get honest map information and can stake out open errands.
 - *The clip*: a hider banks the letter with a flashlight sweeping the doorway, then melts back into the wallpaper one second before the beam lands.

9D — Interactive map systems & evidence

- **Breaker Grid** [5/4/4/5/4] — The map's lights run on 3-4 labeled circuits; both sides can flip them.
 - *How*: Each room cluster has a breaker panel somewhere inconvenient. Dark crushes color contrast — camo painted for lit conditions reads wrong in the dark and vice versa; lighting is itself a mind game. Flipping plays a map-wide CLUNK and pins the flipper's location 2s on hider HUDs. Max 2 dark circuits, 20s re-flip cooldown. Three.js: bake lit/dark lightmaps per room and crossfade — nearly free.
 - *The clip*: seeker flips the breaker and the "wall stain" they passed twice is suddenly neon against the repaint.
- **Rinse Station** [4/4/4/4/4] — Sinks/hoses are the ONLY undo — at a terrible price.
 - *How*: The no-undo rule stands for the can; 2-3 water sources allow ONE full strip-to-white redo per round: 6 uninterrupted seconds of running-water audio, then a fading puddle trail for 30s. Seekers can weaponize hoses: a spray cone that washes environmental paint and force-rinses any hider caught in it (partial paint loss, no tag). Stations groan on activation — sink-camping is a bet, not a guarantee. Server-enforced once-per-round.
 - *The clip*: hider mid-rinse hears footsteps at second 5 of 6 and sprints away as a dripping, half-bright disaster.
- **Fresh Coat Drips** [4/4/4/5/4] — Wet overspray drips onto the floor below you for 20s after spraying — a confession written in your own palette.
 - *How*: 3-5 small drip decals in your actual colors; dry/fade after 45s — a perishable trail giving direction AND palette. Holding the trigger past a threshold pools a bigger splat (punishes panic-painting). Drip spawning is server-authoritative; only real movement writes trails. Three.js: pooled instanced decals — hundreds cost nothing.
 - *The clip*: seeker touches two red drips, looks up slowly at the "red vase" on the shelf.
- **Dust Ledger** [5/5/4/3/4] — Dusty zones record footprints; ceiling fans erase the tape — and silhouette anyone in the airflow.

- *How*: Attic/basement/warehouse floors record hider AND seeker prints (90s fade) — seekers track, hidereads where seekers already swept. Fan switches blow a dust burst that erases the room's prints and briefly outlines any hider standing in the airflow as dust settles — the erase button is itself a gamble. 45s per-room fan cooldown; prints server-side. Rugs/tile record nothing — clean routes are learnable skill.
- *The clip*: the fan bursts and a hider-shaped ghost of falling dust appears standing on the bookshelf.
- **Skylight Cycle** [4/4/3/4/5] — A compressed day: sun bands crawl across the floor; dusk regrades the last 90s.
 - *How*: Sunlight sweeps as a moving hot band on a FIXED, published path per map (learnable = fair; strategy, not RNG). A hider painted for shade gets progressively lit on a slow readable timer; dusk warms every material so early paint drifts "off" late. Three.js: projected light texture on a spline + a global LUT lerp — no realtime shadows.
 - *The clip*: the sun band slides inch by inch toward a motionless hider who finally breaks and runs.
- **Topple Trail** [4/4/4/4/4] — Props remember being bumped; a crooked broom is testimony.
 - *How*: Light props knock subtly askew when squeezed past and never reset — the round accumulates readable history. Seekers who memorize the opening layout track disturbance like rangers; hidereads counter by toppling FALSE trails toward abandoned zones. Seekers disturb props identically (evidence proves passage, not identity). Three.js: props settle to one of 3 pre-baked "disturbed" poses after 2s of cheap impulse physics — deterministic; ~12 live props per room max.
 - *The clip*: seeker stops mid-sweep, stares at one fallen broom, and turns 180° toward the unchecked closet.

9E — Co-op & team economy

- **Totem Stack** [5/5/4/3/3 · REDESIGNED] — 2-3 hidereads stack and paint up as one tall object (coat rack, lamp, cactus).
 - *How*: Original shared-tag (one tag kills the whole stack) let one colluder recruit a stack and tip off a seeker alt — a multi-stake grief. Redesign: **a tag splats only the touched member; the rest force-scatter with a brief 2s reveal** — still a disaster, no longer a bulk execution. Explicit opt-in, procedural sway (never pixel-still), 1.5s mount/dismount with audio, can't move while mounted. Any member's whistle fires for the whole totem. Unlocks high shelves for errands.
 - *The clip*: seeker tags the "floor lamp" and three screaming blobs avalanche out of it.
- **Pigment Transfusion** [4/3/4/5/4] — Press against a teammate 3s and pump paint into their tank.
 - *How*: Transfer up to 30% of tank at 70% efficiency (30% evaporates — no laundering infinite paint); receive at most once per 60s. Both hidereads emit a soft glugging tell within 8m — charity in

a hot zone is dangerous. Enables a "tanker" logistics role near Rinse Stations. Server validates all tank math.

- *The clip*: two "throw pillows" on a couch quietly glugging while the seeker checks under the coffee table.

9F — Seeker economy & tools

- **Gallery Cams** [4/4/5/5/5] — Security booth: a seated seeker watches a paint-freshness heatmap — information for tempo.
 - *How*: One booth per map; cycling feeds + per-room paint-activity deltas (freshness, wet seals, station visits — NEVER positions). A boothed seeker isn't hunting; hiders see a red REC light in the observed room — a live mind game about when to move. 45s continuous cap (booth time shows in Confessional Vote stats). **Guard: heatmap computed server-side, shipped as per-room aggregates only** — nothing scrapeable. 5s delay defeats stream-sniping.
 - *The clip*: REC light dies, three hiders bolt simultaneously — and the seeker was watching the doorway in person.
- **The Snitch Machine** [5/4/5/4/4] — Vending-machine seeker economy: tags earn scrip, scrip buys gadgets — and every purchase is broadcast.
 - *How*: Scrip from tags (big), correct Pulse reads (small), stale-errand reports. Buys: UV lamp (drips/puddles glow), scent visor (10s heat-haze behind sprinting hiders), doorway tripwire chime. Purchases broadcast by name ("A SEEKER BOUGHT: UV LAMP") — buying reveals your plan. **Guard: scrip is match-scoped, zero carryover, never convertible off-match** (persistent scrip = alt-farming). Stock capped 2 of each; 5s loud purchase animation. Unspent scrip converts to a tiny rake-funded round-end bonus — spend vs bank.
 - *The clip*: "A SEEKER BOUGHT: SCENT VISOR" flashes and the hider voice chat goes silent.

9G — Round structure & retention

- **Poltergeist Protocol** [5/5/5/4/3] — Dead hiders return as poltergeists who haunt one interactable at a time — flooding the map with FALSE evidence.
 - *How*: Every 30s a ghost may trigger one world object: flip a breaker, spin a fan, run a faucet 2s, topple a prop. Seekers must epistemically discount clues ("was that dust print real?") — which keeps the evidence grammar from becoming an auto-win late round. Guards: GLOBAL team cooldown (5 dead ≠ 5× chaos), a 1s blue shimmer on triggered objects that sharp seekers can spot to certify fakes, **red-team guard: minimum trigger distance from living teammates** (no beacon-snitching), and ghosts earn no pot share — they play for the team's payout. Nobody alt-tabs after dying.
 - *The clip*: seeker triumphantly follows a fresh drip trail into a dead-end bathroom while the dead hiders cackle in spectator chat.
- **The Landlord** [4/5/4/3/3 · UNSTAKED-ONLY] — 1vAll boss mode: one overpowered seeker owns the building, and the building fights with them.

- *How*: Solo Landlord vs 7-9 hiders: free breaker flips, no-cooldown fans, one room-lock per minute (15s door seal, never on the room with the most hiders — server-checked), permanent scent visor, powers disclosed pre-round. Hiders win by finishing a shared 12-task Errand Board or surviving; each tag makes the Landlord slower and louder (comeback curve). **Red-team: asymmetric solo-stake-vs-pool is a match-dumping machine in private lobbies and unpriceable without a rating system. Ships as an UNSTAKED streamer format only** ("can the lobby beat MY house"); revisit staking only with open matchmaking + random Landlord assignment + a solved rating.
- *The clip*: the library door seals with two hiders inside and the lobby watches the timer tick down like a horror movie.

9H — Red-team verdict summary

Verdict	Features
KEEP as-is	Drip Ducts, Touch-Up Orders, Phantom Strokes, Splat Report, Breaker Grid, Rinse Station, Fresh Coat Drips, Dust Ledger, Skylight Cycle, Pigment Transfusion, Topple Trail
KEEP with named guard	Blackout Coat (endgame lockout), Wet Seal (seal cap + doorway cooldown), Static Bloom (team cooldown, no stacking), Gallery Cams (server aggregates only), Pigment Tether (two-party consent + sever), Snitch Machine (match-scoped scrip), Poltergeist (min distance from living teammates)
REDESIGNED	Fire Drill (opt-in whistle, not forced), Errand Board (side-pool pay, never pot slices), Totem Stack (tag splats touched member only)
CASUAL/UNSTAKED ONLY	The Peacock, The Landlord
CUT	Sheriff's Brush (teammate delete button = pot-invariant violation)

Top 5 threats to the wager layer (as originally proposed): pot-slice Errand Board, Sheriff's Brush, staked Landlord, The Peacock, no-consent Fire Drill (+ Totem shared-death as co-conspirator). All cut, redesigned, or fenced out of staked lobbies.

9I — Dosing: how sabotage ships without poisoning the core game

Three tiers, mirroring how Among Us stays fun (most rounds a suspicion must be WRONG):

1. **Always-on structure** (every lobby, including staked): Touch-Up Orders, Drip Ducts, Gallery Cams, Splat Report, Breaker Grid, Rinse Station, Fresh Coat Drips, Dust Ledger, Skylight Cycle, Topple Trail, Poltergeist. Map systems, not events — players build habits around them.
2. **Rolled spice** (controlled rates, badged in lobby): Blackout fuse box ~60% of matches; Wet Seal + Static Bloom as loadout picks capped at 2 sabotage consumables per hider; roles (Peacock, Tether traitor-pairings, the Mimic per §2) at a combined ~35% lobby roll.
3. **Opt-in mayhem** ("Sabotage Night" playlist + private lobbies only): Fire Drill, stacked-role combos, The Landlord. Clearly badged BEFORE wagers lock — nobody stakes SOL on rules they didn't agree to.

Newbie queues (first ~10 matches): tier 1 only.

9J — Staked-lobby blanket rules (regardless of features)

- Private staked lobbies: equal stakes; winners paid only from that lobby's own pot (kills most collusion EV — colluders just shuffle their own money minus rake).
- All side-pools rake-funded and capped at that match's rake.
- Server-side validation of every ability charge and cooldown; the browser client is never trusted.
- Disconnect/AFK past a grace window = splat; the stake stays in the pot.
- Hard match timer, with Touch-Up Orders as the anti-stall backbone.
- Every future feature passes the pot-invariant litmus test before it ships staked.

9K — v2 build-order note

The v2 features slot into the §8 build order without reshuffling it: tier-1 "always-on structure" systems (Touch-Up Orders, evidence grammar, Breaker Grid, Rinse Station) belong in **Phase 2 (retention scaffold)** after the §8 Phase 0/1 table-stakes and core-loop integrity ship; Poltergeist Protocol joins Spectate-to-Clip as the dead-time answer; roles and opt-in mayhem (Peacock, Fire Drill, Landlord) are **Phase 4 reversible experiments** alongside the Mimic. Nothing in Section 9 jumps the queue ahead of friend-join, fog-of-data anti-cheat, lighting fairness, or the fun gate.
